

SHARE MARKET INVESTMENT FOR BUSY PEOPLE

by David Worrall

Alice: Which road do I take?
Cheshire Cat: Where do you want to go?
Alice: I don't know.
Cheshire Cat: Then it doesn't matter.
from *Alice in Wonderland* by Lewis Carroll

This SHORT COURSE will show you how to invest in the share-market in a diversified way without the need to make hard decisions, having to constantly monitor it, or pay exorbitant management fees and commissions. What about the profits? How about 21%+ pa net average of the last four years?. Did your investment fund manage to return more than that? In this current bull market, if it did not, then you are paying too much for their service!

When considering how to invest hard-earned monies, there are many things to consider, such as accessibility of the funds and the cost of doing so, hidden capital gains taxes, transaction costs etc

I've specially geared the . SHARE MARKET INVESTMENT FOR BUSY PEOPLE his short course to the naive investor not the knowledgeable trader. It not only teaches you how to compare the value of different investment strategies but provides a practical no-nonsense guide to simple ways to invest through Australian and foreign share markets in an intelligent way. It contains useful insights for mature investors as well as being an ideal gift for teaching children and grandchildren the value of reduced-risk investing.

ABOUT THE AUTHOR

With more than 20 years as an academic at Melbourne University and the Australian National University, David Worrall's teaching experience ranges from short courses and undergraduate classes to PhD supervision in Australia, Europe and the USA. Since leaving the ANU, David has concentrated on trading the futures and stock markets, in addition to

private consulting. He has a passion for teaching and especially for explaining ideas in simple non-technical language.

In addition to his trading of the capital markets, David is undertaking research through the Communications Research Group at the University of Canberra and the Capital Markets Cooperative Research Centre at the University of Sydney into innovative ways to use sound to monitor price movement in the capital markets.
